Life360

Dear Life360,

I am writing to express my keen interest in the Networks team's opening for a Senior Software Engineer, as advertised on LinkedIn. Life360's mission to keep people close to their loved ones resonates deeply, and the opportunity to contribute to building and scaling cloud-native solutions, particularly in the area of high-frequency sensor data ingest, is very exciting.

My 5+ years of experience in software engineering includes extensive work with Java (Spring Boot), Python, and AWS services such as Lambda, ECS, and EKS, aligning perfectly with the job requirements. At Airbnb, I modernized reservation workflows using Spring Boot, PostgreSQL, and MongoDB. At Lyft, I delivered a scalable document ingestion pipeline using Python and AWS Lambda. These projects demonstrate my ability to design and deliver scalable, distributed systems.

Life360's commitment to innovation and its remote-first environment are highly appealing. I am eager to contribute to a company that values its members, embraces high intensity, and prioritizes quality engineering. I am confident my skills and experience will enable me to be a valuable asset to your team, and I look forward to the opportunity to discuss my qualifications further.

Sincerely,

SKILLS
